S&M HUB · RULES HANDBOOK

BEFORTH

PREPARED FOR AUREOLE — SALES & MARKETING

RULES & HOW IT WORKS ACCESS, VISIBILITY & AUTOMATIC BEHAVIOUR

A plain-language guide to the rules S&M Hub follows on its own: who can do what, who can see which records, and the things the system does automatically — with the reason behind each rule.

PREPARED BY	PREPARED FOR	DATE	VERSION
BeForth	Aureole — Sales & Marketing	October 2026	1.0 (app v1.4.7)

DOCUMENT INFORMATION

DOCUMENT TITLE	Rules & How It Works — Access, Visibility & Automatic Behaviour
PREPARED BY	BeForth
PREPARED FOR	Aureole — Sales & Marketing
DATE	October 2026
APPLIES TO	S&M Hub v1.4.7

HOW TO READ THIS DOCUMENT

Part 1 gives the big picture. Parts 2 and 3 explain access and visibility. Part 4 lists everything the system does by itself. Part 5 covers admin settings and Part 6 is a quick reference. Each rule says **what** it does and **why**.

TABLE OF CONTENTS

1 The Big Picture

2 Roles, Permissions & Visibility

Three separate layers · how a “yes” is decided · the five roles

3 Who Sees What

The reporting chain · Leads · Orders · Database · Events · Dashboard · Service

4 What Happens Automatically

Won flow · order moves · targets · MIS · star performer · numbering · reminders

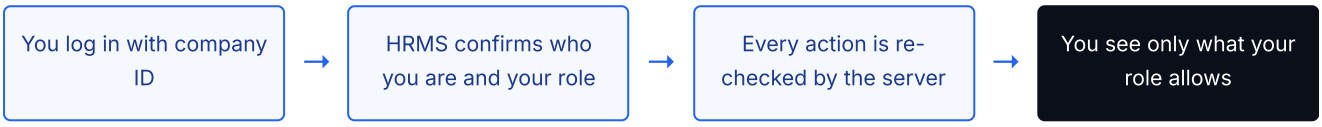

5 Things an Admin Can Change

6 Quick Reference & “Why can’t I see it?” checklist

1 THE BIG PICTURE

S&M Hub is built from three independent systems that talk to each other. Knowing which one is responsible for what explains most “why did it do that?” questions.

SYSTEM	WHAT IT IS RESPONSIBLE FOR
HRMS	Your login (the same username and password as other company systems), your role and permissions. S&M Hub has no password of its own.
Marketing server	All the business data: leads, quotations, orders, contacts, events, service. It checks your permission with HRMS again on every request, so hiding a button is never the only protection.
Notifications	Pop-up (push) alerts for reminders and follow-ups. Optional — you can say no in the browser.

From login to what you see

> THREE QUESTIONS, THREE SETTINGS
> **Can I do this?** is answered by permissions. **Which records can I see?** is answered by role scoping. **What happens by itself?** is answered by the automatic rules in Part 4.

2 ROLES, PERMISSIONS & VISIBILITY

2.1 THREE SEPARATE LAYERS

These are often mixed up. They are different systems that answer different questions.

LAYER	QUESTION IT ANSWERS	EXAMPLE	WHERE IT IS SET
Permissions	May this person *perform an action*?	Create a lead, edit an order, delete an event	HRMS roles and permissions (e.g. `marketing.create_lead`)
Role scoping	Which *rows* does a list show?	An Employee sees only their own leads; a Region Head sees the team's	Built into the server, follows the reporting chain
Visibility Settings	Should *past-quarter numbers* be displayed?	Showing last quarter's figures on the Domains page	Settings → Visibility (admin allow-list per quarter)

WHY THEY ARE KEPT APART

Visibility Settings only hide or show history on screen. It is never used to allow or block someone from creating or editing something. Mixing the two once caused a wrong block on back-dated Won dates, which had to be reversed.

2.2 HOW A "YES" IS DECIDED

1. You log in at HRMS and receive a sign-in token plus your permissions and role.
2. Each page and button checks your permission. If you lack it, the button is hidden or the page shows "Access Denied".
3. When you actually perform an action, the server asks HRMS again to confirm the permission. Results are remembered for a short time (a minute or a few), so a freshly granted permission may take a moment to apply.
4. For lists, the server then filters the rows to your scope (Part 3).

SEEING EVERYTHING IS NOT THE SAME AS DOING EVERYTHING

Anyone holding `marketing.admin` (for example a CEO) is shown all data like a Super Admin. This is **visibility only**. They still need the individual permission for each action, such as creating or deleting a lead.

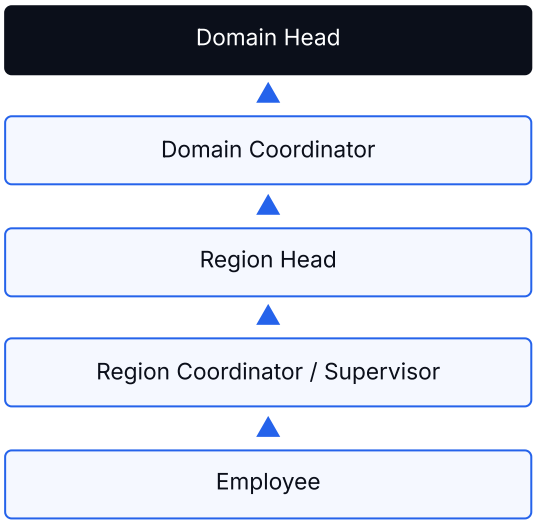

2.3 THE ROLES

ROLE	IN SIMPLE TERMS
Super Admin	Sees everything and can structure domains, regions and targets.
Domain Head	Responsible for a whole market (for example Domestic or Export). Sees the whole domain.
Domain Coordinator	Helps a Domain Head. Domain-wide view, but view-only on structure.
Region Head	Responsible for one or more regions and the team in them.
Region Coordinator / Supervisor	Mid-level: sees their own and employees' work, limited actions. Treated as one tier.
Employee	A salesperson. Works on their own records.

3 WHO SEES WHAT

3.1 THE REPORTING CHAIN

Leads, Orders, Contacts and Customers all use the same idea: **a record belongs to the person who created it, and it is visible upward to everyone above them — never sideways to peers and never downward.** The domain or region written on the record no longer decides who sees it.

Records travel up this chain from whoever created them

RECORD CREATED BY	WHO CAN SEE IT
Domain Head	Only themselves
Domain Coordinator	Themselves + Domain Head
Region Head	Themselves + Domain Coordinator + Domain Head
Region Coordinator / Supervisor	Themselves + Region Head + Domain Coordinator + Domain Head
Employee	Themselves + Region Coordinator/Supervisor + Region Head + Domain Coordinator + Domain Head

> **EXAMPLE**
> Asha (Employee) creates a lead. Her Region Head and Domain Head see it. Her colleague Ravi, also an Employee, does not — even if they are in the same region. Super Admin sees it, and so does whoever the lead is assigned to.

Why: this was a deliberate change from an older model, where every lead and order was visible to everyone in its domain or region. Visibility now follows who created the record and the reporting line

above them.

3.2 RULES THAT APPLY ON TOP

- **The assignee can always see it.** If a lead is assigned to you, you see it regardless of the chain.
- **Orders:** the "creator" is whoever converted the lead into an order, not necessarily the lead's creator. If a manager converts an employee's lead, the order follows the manager's chain; the employee keeps sight of it only if they are the assignee.
- **Customers:** the Account Manager plays the role of the assignee and can always see that customer.
- **Creating an order** requires that you can see the underlying lead.
- **Contact → Customer:** promoting needs the create-customer permission; a promoted contact can no longer be deleted. The new customer gets its own creator, it does not inherit the contact's.

3.3 CREATED ON SOMEONE'S BEHALF (NARROWER)

A Domain or Region Coordinator can create a lead *for* someone in their domain. That lead is deliberately **not** shared up the normal chain. It is visible only to: (1) the coordinator who filed it, (2) the person it was filed for, and (3) the Head of the lead's own domain (plus the assignee and Super Admin).

Effect: a coordinator's filing skips the Region Head and Domain Coordinator and goes straight to the Domain Head.

3.4 WHO CAN PICK "ASSIGNED TO"

ROLE	CAN ASSIGN	TO WHOM
Super Admin	Yes	Anyone
Domain Head / Coordinator	Yes	People in their domain
Region Head	Yes	People in their region
Region Coordinator, Supervisor, Employee	No (field hidden)	—

The server enforces this too: assigning outside your territory is rejected.

3.5 DATABASE: ORGANIZATIONS, CUSTOMERS, CONTACTS

- **Customers and Contacts** follow the reporting chain above.
- **Organizations and Plants** still follow territory: you see an organization if it is linked to a contact or customer in your domain or region. So you can sometimes see an organization without being able to open the specific contact that links it.

3.6 EVENTS & EXHIBITIONS

ROLE	SEES EVENTS
Super Admin	All
Domain Head / Coordinator	Events in their domain(s)
Region Head / Supervisor / Coordinator	Events in the domain(s) their regions belong to
Employee	Only events they are on (selected, travel or hotel list) or created

The booth card-scanning picker is wider on purpose: it lists the caller's domain events for everyone, so staff working a booth can use it without being formally added. Allocating a visitor to an employee gives that employee the contact; removing the allocation takes it back.

3.7 DASHBOARD

Two layers apply to each widget: whether the role may see the widget at all, and the numbers inside it (always filtered to your scope). Head Summary, Leads by Region, Quotations Submitted and the world map are for Domain Heads and Super Admins only; Audit Logs is for admins. The "Performer of the Month" leaderboard is limited to your own team so there is no company-wide ranking leak.

3.8 SERVICE MODULE

Service (contracts, visits, work orders, store, complaints, reports) is controlled by **permissions only**, not by who created a record. It is a shared, cross-team area, so view access is broad and the actions are split by permission.

4 WHAT HAPPENS AUTOMATICALLY

These rules run without anyone clicking anything. Each one lists what happens and why.

4.1 LEADS AND ORDERS

RULE	WHAT THE SYSTEM DOES	WHY
Marking a lead Won	Asks for the closed value and PO, and optionally a back-dated Won date. Works the same from the board's Won button, a drag into Won, or Edit Lead → Mark as Won.	Sales is often entered a few days late. A back-dated Won date puts the win in the right month.
Won date is the single definition of a win	Dashboard, MIS and Star Performer all count a win by its Won date.	So the same sale never appears in different months in different reports.
Order value changes the lead	The lead's closed value follows the order's value, up or down, by the same amount (never below zero, and never below the total of its orders).	So targets and reports follow the real order value.
Changing an order's value needs a reason	A reason of at least 100 characters is required; it is saved in the audit log and the order's history.	Value changes affect targets, so they must be explainable.
Every order status move is logged	One log entry per move: from-status, to-status, who, when. Title and description are optional; moving to Lost needs a description of at least 100 characters.	A clear history, with no gaps and no duplicate entries.
Quotation counting	A quotation counts once, at its latest revised price, in the period it was first sent.	Revisions should not double count.

4.2 TARGETS, MIS & STAR PERFORMER

RULE	WHAT THE SYSTEM DOES	WHY
Targets roll up	Employee targets add up to the region, then to the domain. A region or domain can also carry its own yearly goal; entering 0 clears it.	One set of numbers at every level.
Quarter markers	The Domains page shows each quarter as Missed or Active against its target for the financial year.	Quick view of where the year stands.

RULE	WHAT THE SYSTEM DOES	WHY
MIS "leads created"	A lead counts in the month of its earliest real enquiry or quotation date when that is earlier than the day it was saved. Past months recalculate on their own.	A late entry should still count in the month the enquiry really happened.
Star Performer of the Month	One company-wide winner: the highest total closed value of leads won this month by Won date. Domain Heads are not eligible. The card shows name, region and photo, never the amount.	Recognition without exposing individual figures.
Target ring cap	If achieved is far above a tiny target, the ring caps at "999%+" and a note says the target looks too low.	Avoids unreadable numbers from a mistyped target.

4.3 NUMBERING

Numbering Series builds reference numbers for contacts, customers, leads, enquiries, work orders and job numbers. The pattern builder offers a **Financial Year** placeholder, `{FY}`, which becomes the April–March year (for example `2026–27`) at the moment the number is generated. "Reset counter" can restart numbering **every financial year**.

> EXAMPLE
> A pattern of `WO/{FY}/{0:4}` gives WO/2026-27/0001 for the first work order after 1 April, and restarts at 0001 the next April when the financial-year reset is chosen.

4.4 REMINDERS AND NOTIFICATIONS

A background job runs about every 30 minutes and sends in-app and push notifications. Each step is sent once, and re-arms if a date moves.

WHAT	WHEN
Service contracts ending	60, 30, 15 and 7 days before; also when ended but still Active
Service visits	15, 7, 3 and 1 day(s) before (the customer's preferred date takes priority)
Upload the work-order file	30, 15 and 7 days before a visit, until a file is attached
Parts for a visit	30, 15 and 7 days before, until fully sent

4.5 SETTINGS RELOAD BY THEMSELVES

When an admin changes marketing settings, the server tells every open screen. Pages refresh their settings-dependent parts without anyone needing to log out.

4.6 OTHER THINGS THE SYSTEM DOES FOR YOU

WHERE	WHAT THE SYSTEM DOES
My To-Do	When you mark a task done, HRMS logs it as your DSR.
OD plan and Expected order	Each shows a submission deadline (for example “Submit before 31/10/2026 at 8:30 PM”). The expected-order picker shows only hot leads and greys out a lead you already added, so it cannot be added twice.
Order numbers	The number is assigned from the chosen numbering series when the order is saved and cannot be changed afterwards.
New order value	Filled from the lead’s closed value. If that shows 0, you enter it, and it is saved back on the lead so the target counts it again.
Work orders	Move Prepared → Checked → Approved. The list shows who the order is waiting for and at which level (for example “level 2 of 2”).
Visiting cards	Cards from the external scanner or added by hand are kept as visiting-card contacts until someone converts them into a full Contact.
Live Activity	Shows who is online and on which screen. It refreshes every 5 seconds and is held in memory only, never stored.
Audit logs	Important changes are recorded with who, what and when (for example order value changes and expected-order reports).

5 THINGS AN ADMIN CAN CHANGE

AREA	WHAT YOU CONTROL	WHERE
Roles & permissions	Who can perform which actions	HRMS
Domains & regions	The hierarchy, heads, coordinators, employee targets and yearly goals	Domains
Pipeline stages	Lead and order stages, order and colour, stage groups; whether a stage needs an attachment	Leads / Orders → Manage statuses
Numbering	Number patterns, financial-year placeholder, reset rules	Numbering Series
Past-quarter visibility	Which past quarters’ numbers are displayed	Settings → Visibility
Audit	Review who changed what	Settings → Audit Logs

CHANGING WHO SEES WHAT

The reporting-chain rules are built into the system, not a setting. Changing them is a development change, not an admin switch.

6 QUICK REFERENCE & CHECKLIST

6.1 "WHY CAN'T I SEE THIS?"

1. Who created it? If a colleague at your level or below you created it, you will not see it unless you are above them in the chain or are the assignee.
2. Is it **Won or Lost**? Turn on the Won & Lost toggle on the Leads board.
3. Is a filter on? Check **Only mine**, the date range and the search box.
4. Is a column hidden? **Hide Empty** hides stages with nothing in them.
5. Is it a past quarter on Domains? That is a Visibility Setting; ask an admin.
6. Missing a button, not a record? That is a permission; ask your admin to check your HRMS role.

6.2 THINGS WORTH REMEMBERING

- A win counts in the month of its **Won date**, everywhere.
- A lead's value follows its order's value, and changing it needs a 100-character reason.
- Moving an order to Lost needs a 100-character description.
